

The Migraph ColorBurst™ Color Hand Scanner.

Worth its weight in gold and 262,143 other colors.

At last, a color hand scanner for Amiga systems that's fast and accurate and affordable. With the Migraph ColorBurst™ you can now produce crisp, clear, vivid color images for all your video and multimedia projects, on-screen presentations, and desktop publications. And have a lot of fun doing it.

Speedy scanning. Great detail.

The ColorBurst's large scanning window—more than four inches wide—provides fast, single-pass scanning. Six scanning resolutions from 50 to 400 dots per inch (dpi) let you scan images at the resolution best suited to your chosen output device.

And five scanning modes give you the flexibility to work with color, grayscale and black-&-white images, all with one scanner.

So you can produce exactly the image you need for the output option of your choice: on-screen display, laser and Linotronic printouts, or slides.

No-nonsense software.

The Migraph ColorBurst comes with easy-to-use imaging software for accurate, efficient scanning. It picks up 262,144 brilliant colors in a single pass (or 4,096 colors if you're working on a lower-memory system).

The same software lets you quickly and easily save your image in a variety of standard file formats, ready for direct export to video, graphics, and desktop publishing applications.

So you can export images for use with the Toaster, for enhancement in a program like Deluxe Paint, or for printing in publishing programs like PageStream and Professional Page.

A SCANNING MODE FOR EVERY NEED

	Super Color	Color	Grey-scale	Mono-chrome
Output options	262,144 colors	4,096 colors	64 levels of grey	Black & White
Bits per pixel	18-bit	12-bit	6-bit	1-bit
Resolution settings (dpi)	50, 100, 150, 200	50, 100, 150, 200	100, 200, 300, 400	100, 200, 300, 400

A three-in-one scanning solution.

Versatility is the ColorBurst's specialty. If the image you're after is smaller than a full page—whether it's a photo, illustration, drawing, or cartoon (or business card, postcard, Christmas card, or photo identity card)—you can scan it with the Migraph ColorBurst.

It's a color scanner when you need eye-catching color graphics. A grayscale scanner when you need full-size, true-64-level grayscale images for hassle-free, high-resolution printouts. And it's a monochrome scanner when you need crisp, clear scans of line art—or text for OCR processing.

With the Migraph ColorBurst, capturing high-resolution color (and grayscale and monochrome) images has never been easier. Or more fun.

Features.

- **Speed.** Fast, single-pass scanning.
- **Size.** Half-page scanning window—4.13 inches wide.
- **Adjustable resolution.** Six settings from 50 to 400 dpi.
- **Five scanning modes.** Super color, color, grayscale, dithered halftone (color), and line art (monochrome).
- **Sensitive color scanning.** Scan and save 262,144 vibrant colors (or 4,096 colors on low-memory systems).
- **Grayscale scanning.** True 64-level grayscale scans at 400 dpi.
- **Monochrome scanning.** Scan line art for graphics projects or text for OCR processing.
- **Scan-and-save utility.** Quick, accurate scanning and easy saving for direct export.
- **Versatile file formats.** Save scans in a variety of standard file formats.
- **Compact design.** Comes complete with parallel interface and cable for easy installation.

System Requirements

For Amiga® systems (except the 1000 model) with 2MB of memory. Note: 4MB of memory and a hard disk are recommended.

Dear User Group:

Migraph is proud to introduce the Migraph **ColorBurst™**, the only color hand scanner for the Amiga. With the ColorBurst you get three powerful scanners in one... a color scanner, a true greyscale scanner, and a monochrome scanner for line art and text. Scan and save your images, then import them into your favorite paint, video, or desktop publishing program.

Special Offer!

Your user group may purchase one (1) ColorBurst for only **\$349** (that's \$200 off the list price and our lowest price ever). Get OCR Jr., Optical Character Recognition software, at the same time for only **\$99**. A free scanning guide is included too. This offer expires October 15, 1993.

Features:

- Capable of scanning up to 262,144 colors
- 6 scanning resolutions: 50-400 dots per inch
- 5 scanning modes: Super color, Color, Greyscale, Color dither, and Monochrome line art
- ColorKit software scans/saves color, greyscale, and monochrome images in IFF format (including 24 bit IFF)
- True greyscale scanning mode allows you to scan 64 true greyscale levels at 400 dpi
- Compatible with Workbench versions 1.3, 2.xx, and 3. Supports new AGA chipset.
- 4" wide scan window; parallel interface w/cable

For all Amiga systems (except A1000) with 2MB, 4MB and a hard disk are recommended.
